

WORKSPACE PROTECTION COMMERCIAL

The requirement to provide increasing amounts of security to commercial premises has been matched by the need for management and control of many commercial processes, both for health and safety reasons and to prevent financial loss due the theft of capital assets. While nobody wants to suspect that their staff or colleagues may be responsible for losses, the necessity to take reasonable precautions to protect the innocent is an ongoing management responsibility.

Onwatch has integrated a range of systems to meet this growing need and provides a service carefully balanced to protect - but not to offend - those persons within its control.

ACCESS MANAGEMENT

The effective control of unauthorised entry is becoming increasingly important for those with commercial property to protect. The 'stroll in' thief, the industrial spy, the off limits caller are all well known threats - but the awareness that terrorism may also become a factor, adds urgency to these considerations. Good security is made up of layers of protection and access management is no exception . Onwatch can add effective layers to even sophisticated pass key methods of entry, with CCTV visual verification additions. The range of methods available is impressive, from simple swipe cards to bio technical innovations, to meet the level of control suitable for every requirement.

ASSET TRACKING

For people and assets on the move, management and control has traditionally been the personal responsibility of the traveller. The theft of a laptop computer can have consequences far beyond the value of the machine and it is usually more important to recover it, than to receive the full replacement value. The loss of a vehicle while in transit may not be the end of the world but it is inconvenient and may have serious consequences. Fitting an Onroute device to mobile assets and supplying an associated transponder to lone or vulnerable workers is a convenient and effective way of meeting the sensible, moral and legal responsibilities of commercial managers in respect of their mobile assets.

DIGITAL EVENT RECORDING

Knowing what actually happened during an incident is essential. Speculation is seldom accurate enough to make sound judgements from and for those sensitive areas, the provision of a recording system can prevent small incidents becoming an overblown disaster. A digital recorder is an easier device to manage in accordance with the requirements of the Data Protection Act than a videotape machine. To avoid those damaging mysteries, Onwatch can supply digital systems, IP addressable for multiple authorised access, control and management.

ACTIVATED VIDEO INTRUDER DETECTION

Many commercial establishment's intruder systems have become black listed by the police because of their false alarm record. World wide the false alarm rate is in excess of 90% and intruder alarms have subsequently fallen into disrepute. A visually verified intruder alarm will get response from the police. Onwatch specialises in activated video to provide visually verified intruder detection. If your premises require a reliable, no false alarm system that the police will respond to, contact Onwatch for more details and a quotation.
