

NEED SECURITY – or ADDITIONAL SECURITY – QUICKLY?

Call **instant
Onwatch®**

01892 603800

3 specialist systems to meet
a full range of needs

- 2 x External systems are wire free
- Rapid deployment – can be up and operating in hours
- Day/Night camera systems
- Sensitive PIR detection
- PA to warn off trespassers
- Responsive Onwatch monitoring service
- Independent power and communications link
- 1 x Internal systems have recording system with analytics
- On-site, off-site and smart phone monitoring capability
- Choice of camera types – dome – disguised – covert
- Wired or Wifi communication link

Onwatch **Rapid Deployment System**

This system is completely wire free. Cameras, smoke detectors and other devices are battery powered as is the sophisticated management system and GPRS transmitter.

For ease of use by the hirer, the system is tag activated. No codes to remember and enter via a key pad making setting and un-setting a simple and stress free process. Once armed the system will await intrusion before transmitting the alarm and relevant video image to the Onwatch monitoring station.

Awaiting system activation the Onwatch monitored service is ever vigilant 24/365 and has a range of options for dealing with an intrusion. These include audio warning capability by the central station operator, an on-site siren and high intensity flash or alternatively to remain silent while organising for an arresting authority to attend.

Facial recognition is not the primary objective of this system, mainly because an habitual thief will ensure that their facial features are not available to view – but deterrent definitely is the objective and a verbal warning and visual observation by monitoring staff fulfils this requirement almost completely. For the less wary, arrest is almost inevitable.

This demountable system can be installed in under an hour and is operational immediately upon installation.

This unit is ideal for temporary risk heightening events such as seasonal stock holdings of newly registered cars, firework stocks, Christmas tree stocks or situations of increased criminal activity in a local area increasing concern about existing measures.

All monitoring and maintenance charges are included in the rental charge.

Cost is determined by length of hire and will be the same rate for any continuation to the initial term hire. The initial term is a commitment to pay for that period, thereafter cancellation notice of one week is required.

OW/MOB/5

Onwatch **Mobile Mark 5**

This rugged unit can work with or without an external power source or communications link.

From a lofty position on top of the extendable mast, the fully functional camera has a powerful zoom lens and infra red lighting system to enable it to give excellent quality images over a very large area when intruder activation occurs.

The sensitive long range detectors give the camera the exact location for any intrusion and the rapid camera movement and the speed of transmission means that the Onwatch monitoring service will get a full video story of any ingress into the protected area.

The onboard recorder can be interrogated for historical and current site management by the Onwatch monitoring service or for 'view only' by a 'smart phone'.

The fast response nature of this equipment enables the Onwatch monitoring service to deflect intruders that value their freedom or arrest for those that do not.

This unit is ideal for major outdoor events consisting of temporary buildings, tents, marquees and external displays or for construction and development sites that changes of perspective are almost a daily weekly event. The ability to quickly reposition and remotely amend camera presets adds significantly to its flexibility in use.

The Onwatch central station is always aware of the location of these units via the onboard GPS which links to Google maps and street views for fast response assistance.

All monitoring and maintenance charges are included in the rental charge.

Cost is determined by length of hire and will be the same rate for any continuation to the initial term hire. The initial term is a commitment to pay for that period, thereafter cancellation notice of one week is required.

OW/DVR/3

Onwatch Digital Video Recorder and Transmitter

If the security problem is 'closer to home' and a culprit may be someone you know, suspicion can be cancerous and needs early resolution. This unit can be deployed very quickly and discreetly and can usually provide the information necessary to effectively deal with the problem.

The ability to review the recorded information is invaluable for the management and control of security and other site responsibilities such as health & safety issues

For 24 hour site management this unit is ideal and can be built upon to include on-site and off-site monitoring.

For work time monitoring all camera views are recorded continuously and can be reviewed on-site or off-site for periods usually up to 30 days dependant upon the number of camera views to be recorded.

For non work-time off-site monitoring, the system will require detectors to be positioned in association with camera views. The Onwatch monitoring service can then receive alarm activations once the system is armed on vacation of premises.

The transmitter adds a further dimension of safety for off-site management and central station monitoring. Site managers can maintain their observations by using a smart phone in any area covered by Wifi to review the camera views and interrogate the recorded material. The system also has analytic software to highlight a range of predetermined event occurrences for which to raise an alarm sequence.

A range of cameras to suit specific requirements is available to meet a variety of needs. These would include covert, disguised, day night and HD camera choices.

All monitoring and maintenance charges are included in the rental charge.

Cost is determined by the number of devices and the length of hire and will be the same rate for any continuation to the initial term hire. The initial term is a commitment to pay for that period, thereafter cancellation notice of one week is required.
